

Assessment Details

ID: 111111

Tasks Completed: 12

Gender: Female

Completion Date: 06/22/2022 11:41

Date of Birth: 03/06/2001

Comparative Group: Females, 18-24

Monkey Ladder

A measure of visuospatial working memory — the ability to remember information about objects in space, and update memory based on changing circumstances.

BELOW AVERAGE

86 | 18 Percentile

Result is within the **BELOW AVERAGE range.** Common everyday activities associated with visuospatial working memory include:

- Following step-by-step instructions to carry out a task in a few different locations.
- Viewing a route on a map, then following the route from memory.
- Understanding positioning in sports, and carrying out pre-planned plays.
- Viewing a document, then carrying out the written instructions.

Spatial Span

Measures spatial short-term memory, involved in tasks where nonverbal information needs to be stored and recalled.

AVERAGE

90 | 24 Percentile

Result is within the **AVERAGE range.** Common everyday activities associated with spatial short-term memory include:

- Watching somebody perform a task step-by-step then doing the same task yourself, such as in sports or gym classes.
- Navigating after getting directions from somebody pointing on a map.
- Implementing a strategy you have in memory, like an opening move in chess.
- Remembering positions of cars on the road while you make a difficult driving maneuver.

Token Search

Measures working memory — the ability to temporarily hold information in mind and manipulate or update it based on changing circumstances or demands.

AVERAGE

105 | 64 Percentile

Result is within the **AVERAGE range.** Common everyday activities associated with working memory include:

- Systematically searching for a lost item in your home.
- Solving a mystery by remembering a set of clues, then rearranging them in your mind to tell a story and form a theory.
- Finding the most efficient way to complete a to-do list of tasks around your home before leaving in the morning.
- Efficiently navigating shifting priorities at work.

Monkey Ladder

A measure of visuospatial working memory—the ability to remember information about objects in space, and update memory based on changing circumstances.

Score increased by 43 compared to baseline result on 08/31/2019 (meaningful change) and increased by 5 compared to previous result on 11/04/2019.

ABOVE AVERAGE

125 | 95th Percentile

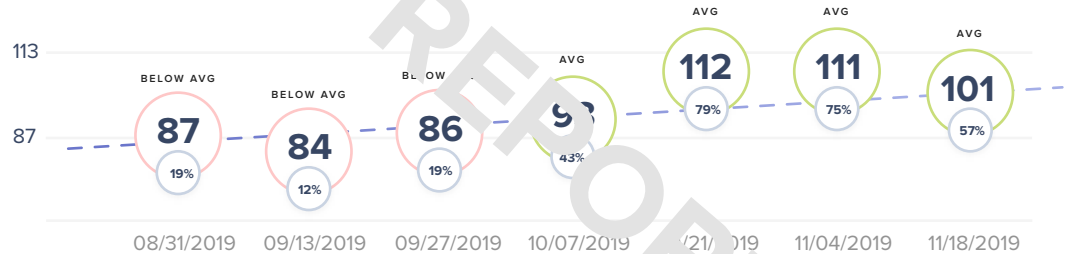

Double Trouble

A measure of response inhibition—the ability to concentrate on relevant information in order to make a correct response despite interference.

Score increased by 14 compared to baseline result on 08/31/2019 (meaningful change) and decreased by 10 compared to previous result on 11/04/2019.

AVERAGE

101 | 57th Percentile

Feature Match

A measure of attention—the ability to focus on relevant details or differences.

Score increased by 7 compared to baseline result on 08/31/2019 and did not change compared to previous result on 11/04/2019.

AVERAGE

107 | 67th Percentile
